

MAIN STAGES OF CONSTRUCTION AND RELATED JOBS

COHABITATION DURING THE CONSTRUCTION PERIOD

Specific efforts will be made to harmonize the work schedule and sequence as much as possible:

- With hunting and fishing activities in the territory
- With other user activities (snowmobiles, ATVs, quads, etc.)

All holders of hunting rights leases will be contacted to discuss the work calendar and minimize potential impacts.

ENVIRONMENTAL MONITORING

Monitoring will be conducted throughout the project development phase to:

- Implement mitigation measures and assess their effectiveness
- Implement supplemental or remedial measures, if necessary

An environmental protection plan specific to the project will be developed.

MAXIMIZING BENEFITS

Partner with indigenous and regional businesses to maximize benefits in the communities.

After the preliminary studies are completed to select the preferred route and after the various government regulatory processes, we will be able to identify and quantify the project needs.

The project needs will be communicated to interested businesses by various means, including calls for tender.
