

NATURAL GAS, USED IN THE REGION EVERY DAY

ORIGIN AND EXTRACTION

The natural gas in the transmission line will come from Western Canada

- In 2017, Alberta produced 72% of Canada's natural gas
- British Columbia produced 25%

Source: Natural Resources Canada

It is extracted in accordance with strict Canadian standards

- Producers are subject to strict regulations in terms of drilling techniques, water protection and air emissions.

The natural gas is transported to Ontario by means of an existing network.
